

AstraZeneca vaccinations to be carried out normally

Following the current scientific opinion of the European Medicines Agency (EMA), which clarifies that, after a thorough investigation, there is no link between the AstraZeneca vaccine and the thromboembolic incidents reported by EU member states, and that the vaccine is considered safe and effective, the Ministry of Health informs the public that as of Friday, 19 March 2021, vaccinations with the AstraZeneca vaccine will resume.

Therefore, citizens who have an appointment for vaccination are requested to come to the Vaccination Center where they have arranged their appointment, at the time they have arranged the appointment.

In relation to the appointments that were postponed from 16-18 March, more details on how to reschedule them will be given at a press conference to be held on 19 March.
