

Getting closer to the target for vaccination of 65% of the population with at least the first dose – Information on vaccination appointments

The protection of the population through vaccinations continues at a rapid pace, building the wall of immunity. The positive response of citizens to vaccination allows for the gradual implementation of the strategy for the resumption of social activity, restarting the economy and lifting restrictive measures. **Our country is getting closer to achieving the goal of vaccination, at least with the first dose, of 65% of the adult population by the end of June.** It is characteristic that among the countries of the European Union, **Cyprus remains in the first places in terms of vaccine doses** (65,35 doses per 100 inhabitants), as a result of the **cooperation and responsibility shown by the vast majority of citizens** in the efforts to deal with the pandemic.

COVID-19 vaccine doses administered per 100 people, May 27, 2021

Total number of vaccination doses administered per 100 people in the total population. This is counted as a single dose, and may not equal the total number of people vaccinated, depending on the specific dose regime (e.g. people receive multiple doses).
